

TECHNICAL DATA SHEET

Argoz Carbon 05 - Carbon IR Window film

Beautiful neutral black shade

Especially fast shrinking due to UltraShrinkTM Technology

ARGOZ CARBON is a special high-quality automotive window film and is constructed from multiple layers, making it a very color-stable and easy-to-install film. Because the layers contain carbon pigments, the film has a beautiful neutral black tint and provides exceptionally clear transparency. Since it contains no metalized particles, interference with electronic equipment is eliminated. ARGOZ CARBON is perfect when a vehicle needs a nice "cool" look, as the neutral color of the film enhances the paint color.

Features

- exceptionally clear transparency
- extremely nice neutral black carbon shade
- high heat rejection
- high infrared (IR) rejection
- UV blocking
- no interference with GPS or other signals
- bonds nicely to the grids (dot-matrix)
- UltraShrinkTM technology
- roll length: 30,5m

Technical information

	Visible light transmission	6,4%
	Glare reduction	90%
	Solar energy rejection	57%
	Visible light reflection	4%
	Infra red rejection (760 - 2500 Nm)	67,7%
	Ultra violet rejected	97,1%

Warranty

SunRange window films are developed for the professional market and are known for years of reliability and comfort.

Garantie

SunRange Tuningfolien werden für den professionellen Markt entwickelt und sind für jahrelange Zuverlässigkeit und Komfort bekannt.

Superior clarity

Easy shrinkage and installation

Good adhesion on the dot matrix
