SUNRAGE
AUTOMOTIVE WINDOWFILM

Your dealer:

DESIGNED BY

OMEGA SKINZ

A silver sports car is parked on a wet, reflective surface at sunset. The car is positioned in the center-left of the frame, facing right. Its reflection is clearly visible in the water. In the background, there are mountains and a modern building with large glass windows on the right. The sky is a warm orange color from the setting sun.

Drive Your Style

SUNRAGE
— AUTOMOTIVE WINDOWFILM —

Drive Your Style

There are people who like to make their own choices.
In terms of taste, clothing style, appearance; everything in this shows that they are not followers,
but rather like individualism.
This is why there are so many car brands and models.
All their own style, all their colour. And our SunRage window films help with this.

Give your car more style. Make your car individualistic.

Make your bolide 'sexy'

Have you ever noticed that in car commercials, the windows of the car are always dark? There's a logical reason for that.

By limiting the view inside with window film, the focus is much more on the lines and shapes of the car.

The beautiful, slender streamlines of the bolide stand out and suddenly become a feast for the eyes.

And that's what you want: charisma, style and class.

Available in different shades, light gradations and types;
all to suit your needs.

Photos are for illustrative purposes.

Beauty is in the contours. Not in the peep in.

Give your car its own identity - individualistic or unattainable

Tinted windows make your car mysterious. Unreachable almost... as if it has a life of its own. The car stands out. In a way that exudes class, while making peeping in almost impossible. It looks as if your car was driven straight out of an advertising brochure.

Not everyone needs to see who you are.
As long as they remember you.

Less peeping = more privacy

Nothing more dangerous than valuable items lying in full view. Your car is not a moving shop window, is it? Or how about your precious fellow passengers in plain view without privacy?

Tinting the windows with SunRage window films greatly reduces the visibility inside. Burglars and uninvited guests are less likely to see anything, let alone grab anything.

Protect your skin; prevent ageing

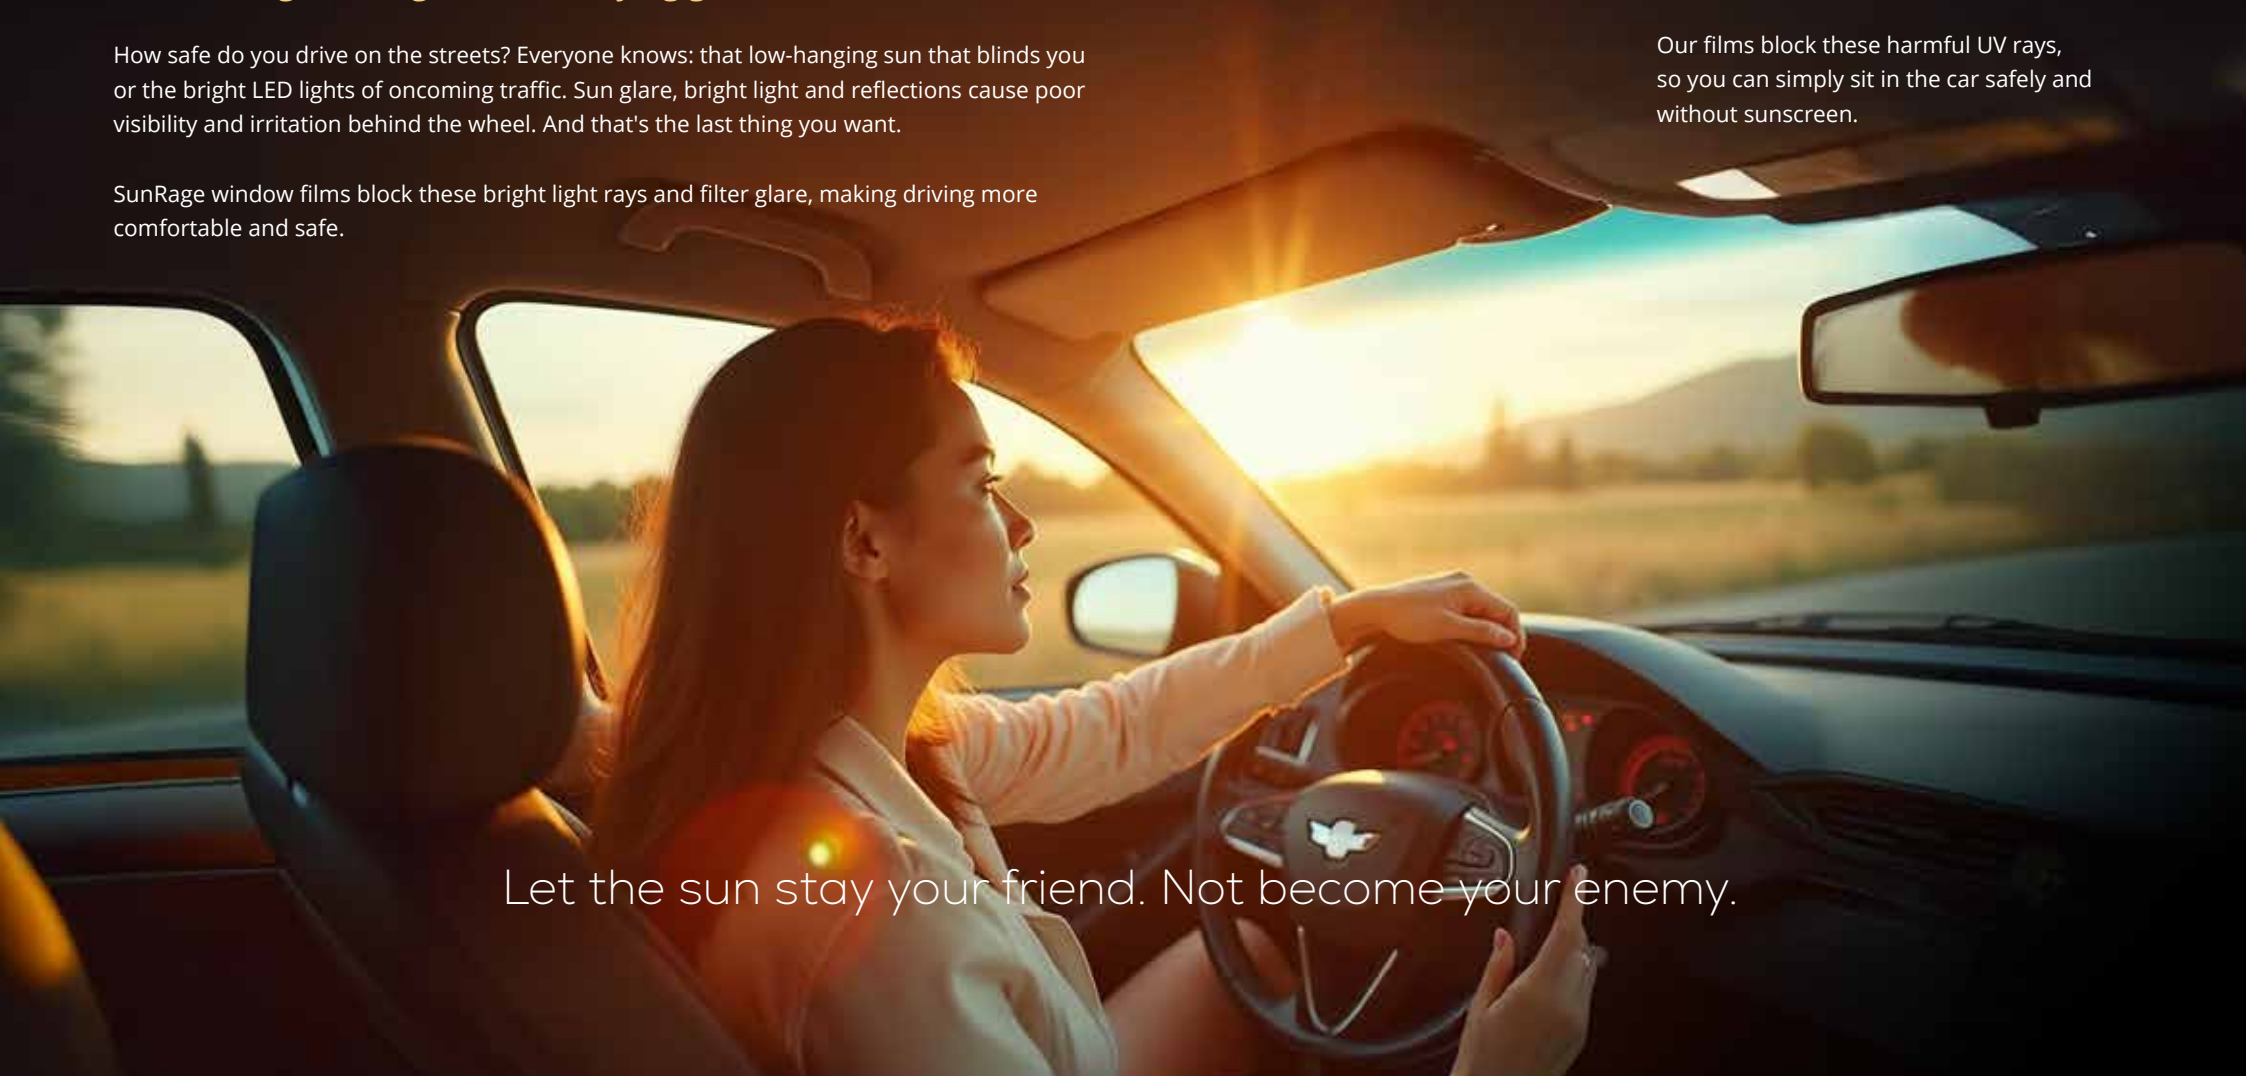

We all love the sun.
But... did you know that the same sun also releases UV-B rays?
And these, among other things, cause collagen breakdown, thus skin ageing, and increase the risk of skin cancer.
Car glass does not simply block these rays. SunRage window films do.

Our films block these harmful UV rays, so you can simply sit in the car safely and without sunscreen.

Reduce bright sunlight and annoying glare

How safe do you drive on the streets? Everyone knows: that low-hanging sun that blinds you or the bright LED lights of oncoming traffic. Sun glare, bright light and reflections cause poor visibility and irritation behind the wheel. And that's the last thing you want.

SunRage window films block these bright light rays and filter glare, making driving more comfortable and safe.

Let the sun stay your friend. Not become your enemy.

Less heat in the car
= less airco needed

Sunlight consists of energy, and it comes right through your car windows. That energy, especially in the infrared spectrum from 500 to 2500 nm, creates heat. And you feel it. It makes you languid, sluggish and sleepy. Sure, you can turn on the air conditioning. But that eats fuel or power.

How nice would it be if a window film simply blocked the sun rays?

It can. SunRage window films reduce or block most radiation in the spectrum up to 2500 nm. This blocks solar heat and UV light, while allowing visible light to pass through.

Result: less stress in the car and less air conditioning use, saving fuel or battery.

Drive safer and more energised

Minder hitte betekent: minder vermoeidheid.
Dus rijd jij met je gezin frisser en alerter.
Iedere rit.

Glare is filtered by up to 94%

Infrared (IR) is blocked up to 85%.

UV light is blocked by up to 99%

Sunlight hits the glass

Solar power is barred by up to 67%

Visible light is transmitted

Peeking in is reduced
