

## TECHNICAL DATA SHEET

### Voltar Elite 70 - Premium Visual Pro

Non metal - perfect visibility to the outside  
Especially fast shrinking due to UltraShrink™ Technology

VOLTAR ELITE is a premium quality automotive window film which uses color stable pigments in several layers during production. As the film does not contain any metallized pigments, the film does not reflect but has a nice even "look". Because of this choice of pigments, there is also no interference possible with GPS signals. Quite ideal.

The film blocks sunlight, solar energy and glare. It is also UV resistant which protects the interior from discoloration. It adheres particularly well to the grids (dot-matrix) and is easily shaped using the heatshrink method.

#### Features

- exceptionally clear transparency
- high heat rejection
- UV blocking
- does not contain metal pigments
- no interference with GPS or other signals
- bonds nicely to the grids (dot-matrix)
- UltraShrink™ technology
- roll length: 30,5m

#### Technical information

	Visible light transmission	76%
	Glare reduction	29%
	Solar energy rejection	32%
	Visible light reflection	5%
	Infra red rejection (760 - 2500 Nm)	N/A
	Ultra violet rejected	99%

#### Warranty

SunRage window films are developed for the professional market and are known for years of reliability and comfort.

#### Garantie

SunRage Tuningfolien werden für den professionellen Markt entwickelt und sind für jahrelange Zuverlässigkeit und Komfort bekannt.

Superior clarity

Easy shrinkage and installation

Good adhesion on the dot matrix
